**Application Note** Anti-Human IgA alpha heavy chain is suitable for use in

immunoelectrophoresis, western-blot, competitive western-blot, ELISA and competitive ELISA assays. Specific conditions for reactivity and signal

detection should be optimized by the end user.

**Purity** This product was prepared from monospecific antiserum by immunoaffinity

chromatography using Human IgA coupled to agarose beads followed by solid phase adsorption(s) to remove any unwanted reactivities. Assay by

immunoelectrophoresis resulted in a single precipitin arc against anti-Peroxidase, anti-Goat Serum, Human IgA and Human Serum. Specificity was confirmed by ELISA minimal cross reactivity against other

Human heavy or light chain isotypes.

**Storage Condition** Store vial at 4° C prior to restoration. For extended storage aliquot

contents and freeze at -20° C or below. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. This product is stable for several weeks at 4° C as an undiluted

liquid. Dilute only prior to immediate use.

## **Background**

Anti-Human IgA alpha heavy chain antibody generated in goat detects specifically Human IgA alpha heavy chain. This secondary antibody anti-Human is ideal for investigators who routinely perform ELISA, Sandwich ELISA, titration assays, western-blot, immunoprecipitation and more generally immunoassays.
