Application Note Immunoblotting, ELISA, immunohistochemistry, immunomicroscopy as well

as other antibody based assays using streptavidin or avidin conjugates

requiring lot-to-lot consistency.

Purity This product was prepared from polyspecific antiserum by immunoaffinity

chromatography using antigens coupled to agarose beads followed by cross

adsorption to remove unwanted specificities. Assay by

immunoelectrophoresis resulted in a single precipitin arc against anti-Biotin, anti-Goat Serum, Mouse IgG, Mouse IgA and Mouse IgM. No reaction was observed against bovine, horse or human serum proteins. This reagent is suitable for the detection of all mouse isotypes and chain combinations. ELISA was used to confirm specificity at less than 1% of the target signal.

Storage Condition Store vial at 4° C prior to restoration. For extended storage aliquot

contents and freeze at -20° C or below. Avoid cycles of freezing and thawing. Centrifuge product if not completely clear after standing at room temperature. This product is stable for several weeks at 4° C as an undiluted
