

# Monkey IgM Catalog # ASR3030

#### **Product Information**

**Description** MONKEY IgM whole molecule

**Conjugate** Unconjugated

Physical State Liquid (sterile filtered)

Host Isotype IgM

**Buffer** 0.1 M Tris Chloride, 0.5 M Sodium Chloride, pH 8.0

**Species of Origin** Monkey **Stabilizer** None

**Preservative** 0.1% (w/v) Sodium Azide

#### **Additional Information**

Shipping Condition Wet Ice

**Application Note** Monkey IgM whole molecule can be utilized as a control or standard reagent

in SDS, Western Blotting, and ELISA experiments. Monkey IgM whole molecule is stable at 4° C prior to restoration. It is recommended to aliquot restored Monkey IgM whole molecule after adding equal parts glycerol for storage at -20° C for extended storage and to prevent repeated freeze-thaw cycles.

**Purity** Monkey IgM whole molecule was prepared from normal serum by a

multi-step process which includes delipidation, selective precipitation and tandem molecular sieve chromatography followed by extensive dialysis against the buffer stated above. Monkey IgM whole molecule was assayed by immunoelectrophoresis resulted in a single precipitin arc against anti-Monkey Serum and anti-Monkey IgM ( □chain specific). No reaction was observed against anti-Monkey IgG F(c). Some light chain cross reactivity

will occur with anti-Monkey IgG.

**Storage Condition** Store vial at 4° C prior to opening. This product is stable 4° C as an

undiluted liquid. Dilute only prior to immediate use. For extended storage mix with an equal volume of glycerol, aliquot contents and freeze at -20° C or

below. Avoid cycles of freezing and thawing.

**Precautions Note**This product is for research use only and is not intended for therapeutic or

diagnostic applications.

## **Background**

Immunoglobulin M is the largest antibody isotype and the first to be secrected against an initial exposure to antigen. IgM is predominantly produced in the spleen. Formed from covalently linking 5 immunoglobulins together, the approixmate molecular weight of IgM is 900kDa and possesses 10 binding sites (though due to the size of most antigens, not all sites are capable of binding at once). Due to this large size, IgM is typically isolated to the serum.

### **Images**

SDS-PAGE of Monkey IgM Whole Molecule. Lane 1: Monkey IgM, Non-Reduced. Lane 2: Monkey IgM, Reduced. Load: 1.0 µg per lane. Predicted/Observed size - Non-Reduced: 900 kDa (Pentamer), 900 kDa (Molecule larger than can pass through gel), Reduced: 78 and 25 kDa, 75 and 25 kDa.

Please note: All products are 'FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC OR THERAPEUTIC PROCEDURES'.
