<b>Application Note</b>	Anti-Rabbit IgG (H&L) Phycoerythrin Antibody is suitable for immunomicroscopy and flow cytometry or FACS analysis as well as other antibody based fluorescent assays requiring extremely low background levels, absence of F(c) mediated binding, lot-to-lot consistency, high titer and specificity. The maximum amount of reagent required to stain $1 \times 10^6$ cells in flow cytometry is approximately 1.0 $\mu$ g of antibody conjugate. Lesser amounts of reagent may be sufficient for staining. Optimal titers for other applications should be determined by the researcher. As a general guideline dilutions of 1:100 to 1:250 should be suitable for most applications.
<b>Purity</b>	Rabbit IgG (H&L) Antibody Phycoerythrin conjugated (Pre-Adsorbed) was prepared from monospecific antiserum by immunoaffinity chromatography using Rabbit IgG coupled to agarose beads followed by solid phase adsorption(s) to remove any unwanted reactivities, conjugation to phycoerythrin and subsequent purification, and extensive dialysis against the buffer stated above. Assay by immunoelectrophoresis resulted in a single precipitin arc against anti-Phycoerythrin, anti-Goat Serum, Rabbit IgG and Rabbit Serum. No reaction was observed against Bovine, Chicken, Goat,

Guinea Pig, Hamster, Horse, Human, Mouse, Rat and Sheep Serum Proteins.

### Storage Condition

Store vial at 4° C prior to opening. Dilute only prior to immediate use. Do not freeze after reconstitution. Store reagent in the dark. This product is stable at 4° C as an undiluted liquid. Use subdued lighting during handling and incubation of cells prior to analysis.

### Precautions Note

This product is for research use only and is not intended for therapeutic or diagnostic applications.

## Background

Anti-Rabbit IgG (H&L) phycoerythrin conjugated antibody generated in goat detects specifically rabbit IgG. This secondary phycoerythrin conjugated antibody anti-Rabbit is ideal for investigators who routinely perform titration assays, microscopy and FACS analysis.
