

MID1 Antibody (monoclonal) (M06)

Mouse monoclonal antibody raised against a partial recombinant MID1. Catalog # AT2869a

Product Information

Application	WB
Primary Accession	<u>015344</u>
Other Accession	<u>BC053626</u>
Reactivity	Human
Host	mouse
Clonality	monoclonal
Isotype	IgG2b Kappa
Clone Names	2C11
Calculated MW	75251

Additional Information

Gene ID	4281
Other Names	E3 ubiquitin-protein ligase Midline-1, 632-, Midin, Putative transcription factor XPRF, RING finger protein 59, RING finger protein Midline-1, Tripartite motif-containing protein 18, MID1, FXY, RNF59, TRIM18, XPRF
Target/Specificity	MID1 (AAH53626, 441 a.a. ~ 540 a.a) partial recombinant protein with GST tag. MW of the GST tag alone is 26 KDa.
Dilution	WB~~1:500~1000
Format	Clear, colorless solution in phosphate buffered saline, pH 7.2 .
Storage	Store at -20°C or lower. Aliquot to avoid repeated freezing and thawing.
Precautions	MID1 Antibody (monoclonal) (M06) is for research use only and not for use in diagnostic or therapeutic procedures.

Background

The protein encoded by this gene is a member of the tripartite motif (TRIM) family, also known as the 'RING-B box-coiled coil' (RBCC) subgroup of RING finger proteins. The TRIM motif includes three zinc-binding domains, a RING, a B-box type 1 and a B-box type 2, and a coiled-coil region. This protein forms homodimers which associate with microtubules in the cytoplasm. The protein is likely involved in the formation of multiprotein structures acting as anchor points to microtubules. Mutations in this gene have been associated with the X-linked form of Opitz syndrome, which is characterized by midline abnormalities such as cleft lip, laryngeal cleft, heart defects, hypospadias, and agenesis of the corpus callosum. This gene was also the first example of a gene subject to X inactivation in human while escaping it in mouse. Multiple different transcript variants are generated by alternate splicing; however, the full-length nature of some of

the variants has not been determined.
