

ITA6 Antibody

Affinity Purified Rabbit Polyclonal Antibody (Pab) Catalog # AW5255

Product Information

Application WB	
Primary Accession P232	<u>229</u>
Reactivity Mou	ise, Human
Host Rabl	oit
Clonality Poly	clonal
Calculated MW 1266	506
Isotype Rabl	oit IgG
Antigen Source HUN	IAN

Additional Information

Gene ID	3655
Antigen Region	53-329
Other Names	ITGA6; Integrin alpha-6; CD49 antigen-like family member F; VLA-6; CD_antigen=CD49f; Integrin alpha-6 heavy chain; Integrin alpha-6 light chain
Dilution	WB~~ 1:1000
Target/Specificity	This ITA6 antibody is generated from rabbits immunized with ITA6 recombinant protein.
Format	Purified polyclonal antibody supplied in PBS with 0.09% (W/V) sodium azide. This antibody is purified through a protein A column, followed by peptide affinity purification.
Storage	Maintain refrigerated at 2-8°C for up to 2 weeks. For long term storage store at -20°C in small aliquots to prevent freeze-thaw cycles.
Precautions	ITA6 Antibody is for research use only and not for use in diagnostic or therapeutic procedures.

Protein Information

Name	ITGA6
Function	Integrin alpha-6/beta-1 (ITGA6:ITGB1) is a receptor for laminin on platelets (By similarity). Integrin alpha-6/beta-1 (ITGA6:ITGB1) is present in oocytes and is involved in sperm-egg fusion (By similarity). Integrin alpha-6/beta-4 (ITGA6:ITGB4) is a receptor for laminin in epithelial cells and it plays a critical

	structural role in the hemidesmosome (By similarity). ITGA6:ITGB4 binds to NRG1 (via EGF domain) and this binding is essential for NRG1-ERBB signaling (PubMed: <u>20682778</u>). ITGA6:ITGB4 binds to IGF1 and this binding is essential for IGF1 signaling (PubMed: <u>22351760</u>). ITGA6:ITGB4 binds to IGF2 and this binding is essential for IGF2 signaling (PubMed: <u>28873464</u>).
Cellular Location	Cell membrane; Single-pass type I membrane protein. Cell membrane; Lipid-anchor
Tissue Location	Integrin alpha-6/beta-4 is predominantly expressed by epithelia. Isoforms containing segment X1 are ubiquitously expressed. Isoforms containing segment X1X2 are expressed in heart, kidney, placenta, colon, duodenum, myoblasts and myotubes, and in a limited number of cell lines; they are always coexpressed with the ubiquitous isoform containing segment X1. In some tissues (e.g Salivary gland), isoforms containing cytoplasmic segment A and isoforms containing segment B are detected while in others, only isoforms containing one cytoplasmic segment are found (segment A in epidermis and segment B in kidney). Processed integrin alpha-6: Expressed at low levels in normal prostate tissue with elevated levels in prostate cancer tissue (at protein level) (PubMed:15023541)

Background

The ITGA6 protein product is the integrin alpha chain alpha 6. Integrins are integral cell-surface proteins composed of an alpha chain and a beta chain. A given chain may combine with multiple partners resulting in different integrins. For example, alpha 6 may combine with beta 4 in the integrin referred to as TSP180, or with beta 1 in the integrin VLA-6. Integrins are known to participate in cell adhesion as well as cell-surface mediated signalling.
