

SPARC

Catalog # PVGS1084

Product Information

Primary Accession P09486
Species Human

Sequence Ala18-Ile303, expressed with additional N-terminal sequence (MSYYHHHHHH

DYDIPTTENLYFQGAMGS)

Purity > 95% as analyzed by SDS-PAGE

> 95% as analyzed by HPLC

Endotoxin Level

Biological Activity Fully biologically active when compared to standard. The ED₅₀ as determined

by its ability to inhibit the cell growth of Mv1Lu mink lung epithelial cells is less than 3.0 [g/ml, corresponding to a specific activity of > 333.0 IU/mg.

Expression System E. coli

Theoretical Molecular Weight 36.1 kDa

Formulation Lyophilized from a 0.2 Im filtered solution in PBS, pH 7.4.

Reconstitution It is recommended that this vial be briefly centrifuged prior to opening to

bring the contents to the bottom. Reconstitute the lyophilized powder in sterile distilled water or aqueous buffer containing 0.1 % BSA to a

concentration of 0.1-1.0 mg/ml.

Storage & Stability Upon receiving, this product remains stable for up to 6 months at -70°C or

-20°C. Upon reconstitution, the product should be stable for up to 1 week at

4°C or up to 3 months at -20°C. Avoid repeated freeze-thaw cycles.

Additional Information

Gene ID 6678

Other Names SPARC, Basement-membrane protein 40, BM-40, Osteonectin, ON, Secreted

protein acidic and rich in cysteine, SPARC, ON

Target Background SPARC, an acronym for 'secreted protein, acidic and rich in cysteine', is also

known as osteonectin or BM-40. It is the founding member of a family of secreted matricellular proteins with similar domain structure. The 303 amino acid , 43 kDa protein contains a 17 aa signal sequence, an N-terminal acidic

region that binds calcium, a follistatin domain containing Kazal-like

sequences, and a C-terminal extracellular calcium (EC) binding domain with two EF-hand motifs. SPARC is produced by fibroblasts, capillary endothelial cells, platelets and macrophages, especially in areas of tissue morphogenesis and remodeling. SPARC shows context-specific effects, but generally inhibits adhesion, spreading and proliferation, and promotes collagen matrix formation. For endothelial cells, SPARC disrupts focal adhesions and binds and sequesters PDGF and VEGF. SPARC is abundantly expressed in bone, where it promotes osteoblast differentiation and inhibits adipogenesis.

Protein Information

Name SPARC

Synonyms ON

Function Appears to regulate cell growth through interactions with the extracellular

matrix and cytokines. Binds calcium and copper, several types of collagen, albumin, thrombospondin, PDGF and cell membranes. There are two calcium binding sites; an acidic domain that binds 5 to 8 Ca(2+) with a low affinity and

an EF-hand loop that binds a Ca(2+) ion with a high affinity.

Cellular Location Secreted, extracellular space, extracellular matrix, basement membrane.

Note=In or around the basement membrane

Please note: All products are 'FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC OR THERAPEUTIC PROCEDURES'.
