

Fractalkine/CX3CL1

Catalog # PVGS1106

Product Information

Primary Accession P78423
Species Human

Sequence Gln25-Gly100

Purity > 97% as analyzed by SDS-PAGE

> 97% as analyzed by HPLC

Endotoxin Level

Biological Activity Fully biologically active when compared to standard. The biological activity

determined by a chemotaxis bioassay using human T-lymphocytes is in a

concentration of 5.0-10.0 ng/ml.

Expression System E. coli

Theoretical Molecular Weight 8.6 kDa

Formulation Reconstitution

Lyophilized from a 0.2 Im filtered solution in 20 mM PB, pH 7.4, 50 mM NaCl. It is recommended that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Reconstitute the lyophilized powder in sterile distilled water or aqueous buffer containing 0.1% BSA to a

concentration of 0.1-1.0 mg/ml.

Storage & Stability Upon receiving, this product remains stable for up to 6 months at -70°C or

-20°C. Upon reconstitution, the product should be stable for up to 1 week at

4°C or up to 3 months at -20°C. Avoid repeated freeze-thaw cycles.

Additional Information

Gene ID 6376

Other Names Fractalkine, C-X3-C motif chemokine 1, CX3C membrane-anchored chemokine,

Neurotactin, Small-inducible cytokine D1, Processed fractalkine, CX3CL1

{ECO:0000303|PubMed:9024663}

Target Background Fractalkine, also named neurotactin, is a novel chemokine recently identified

through bioinformatics. Fractalkine has a unique C-X3-C cysteine motif near the amino-terminus and is the first member of a fourth branch of the chemokine superfamily. Unlike other known chemokines, fractalkine is a type 1 membrane protein containing a chemokine domain tethered on a long mucin-like stalk. Human fractalkine cDNA encodes a 397 amino acid (aa) residue membrane protein with a 24 aa residue predicted signal peptide, a 76 aa residue chemokine domain, a 241 aa residue stalk region containing 17 degenerate mucin-like repeats, a 19 aa residue transmembrane segment and

a 37 aa residue cytoplasmic domain. The extracellular domain of human fractalkine can be released, possibly by proteolysis at the dibasic cleavage site proximal to the membrane, to generate soluble fractalkine. The soluble chemokine domain of human fractalkine was reported to be chemotactic for T cells and monocytes while the soluble chemokine domain of mouse fractalkine was reported to chemoattract neutrophils and T-lymphocytes but not monocytes.

Protein Information

Name CX3CL1 {ECO:0000303 | PubMed:9024663}

Function Chemokine that acts as a ligand for both CX3CR1 and integrins ITGAV:ITGB3 and ITGA4:ITGB1 (PubMed:<u>12055230</u>, PubMed:<u>21829356</u>, PubMed:<u>23125415</u>,

PubMed:<u>9782118</u>, PubMed:<u>9931005</u>). The CX3CR1-CX3CL1 signaling exerts distinct functions in different tissue compartments, such as immune response, inflammation, cell adhesion and chemotaxis (PubMed:<u>12055230</u>, PubMed:<u>9024663</u>, PubMed:<u>9177350</u>, PubMed:<u>9782118</u>). Regulates leukocyte adhesion and migration processes at the endothelium (PubMed:<u>9024663</u>, PubMed:<u>9177350</u>). Can activate integrins in both a CX3CR1-dependent and

CX3CR1-independent manner (PubMed:23125415, PubMed:24789099). In the

presence of CX3CR1, activates integrins by binding to the classical ligand-binding site (site 1) in integrins (PubMed:23125415,

PubMed: <u>24789099</u>). In the absence of CX3CR1, binds to a second site (site 2) in integrins which is distinct from site 1 and enhances the binding of other

integrin ligands to site 1 (PubMed:23125415, PubMed:24789099).

Cellular Location Cell membrane; Single-pass type I membrane protein

Tissue Location Expressed in the seminal plasma, endometrial fluid and follicular fluid (at

protein level). Small intestine, colon, testis, prostate, heart, brain, lung, skeletal muscle, kidney and pancreas. Most abundant in the brain and heart

Please note: All products are 'FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC OR THERAPEUTIC PROCEDURES'.
