

## NAP-2/CXCL7

Catalog # PVGS1130

## **Product Information**

Primary Accession P02775
Species Human

Sequence Ala59-Asp128

**Purity** > 97% as analyzed by SDS-PAGE

> 97% as analyzed by HPLC

**Endotoxin Level** 

**Biological Activity** Fully biologically active when compared to standard. The biological activity

determined by a chemotaxis bioassay using human peripheral blood

neutrophils is in a concentration range of 1.0-10.0 ng/ml.

**Expression System** E. coli

Theoretical Molecular Weight 7.6 kDa

Formulation Reconstitution

Lyophilized from a 0.2 Im filtered solution in 20 mM PB, pH 7.4, 50 mM NaCl. It is recommended that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Reconstitute the lyophilized powder in sterile distilled water or aqueous buffer containing 0.1 % BSA to a

concentration of 0.1-1.0 mg/ml.

**Storage & Stability** Upon receiving, this product remains stable for up to 6 months at -70°C or

-20°C. Upon reconstitution, the product should be stable for up to 1 week at

4°C or up to 3 months at -20°C. Avoid repeated freeze-thaw cycles.

## **Additional Information**

**Gene ID** 5473

Other Names Platelet basic protein, PBP, C-X-C motif chemokine 7, Leukocyte-derived

growth factor, LDGF, Macrophage-derived growth factor, MDGF,

Small-inducible cytokine B7, Connective tissue-activating peptide III, CTAP-III, LA-PF4, Low-affinity platelet factor IV, TC-2, Connective tissue-activating

peptide III(1-81), CTAP-III(1-81), Beta-thromboglobulin, Beta-TG,

Neutrophil-activating peptide 2(74), NAP-2(74), Neutrophil-activating peptide

2(73), NAP-2(73), Neutrophil-activating peptide 2, NAP-2, TC-1,

Neutrophil-activating peptide 2(1-66), NAP-2(1-66), Neutrophil-activating peptide 2(1-63), NAP-2(1-63), PPBP, CTAP3, CXCL7, SCYB7, TGB1, THBGB1

**Target Background** Neutrophil Activating Peptide 2 (NAP-2) is proteolytically processed

carboxyl-terminal fragments of platelet basic protein (PBP) which is found in

the alpha-granules of human platelets. NAP-2 is a member of the CXC

chemokines. Similar to other ELR domain containing CXC chemokines such as IL-8 and the GRO proteins, NAP-2 has been shown to bind CXCR-2 and to chemoattract and activate neutrophils. Although CTAP-III,  $\beta$ -TG and PBP represent amino-terminal extended variants of NAP-2 and possess the same CXC chemokine domains, these proteins do not exhibit NAP-2 activity. Recently, it has been shown that the additional amino-terminal residues of CTAP-III masks the critical ELR receptor binding domain that is exposed on NAP-2 and may account for lack of NAP-2 activity.

## **Protein Information**

Name PPBP

**Synonyms** CTAP3, CXCL7, SCYB7, TGB1, THBGB1

**Function** LA-PF4 stimulates DNA synthesis, mitosis, glycolysis, intracellular cAMP

accumulation, prostaglandin E2 secretion, and synthesis of hyaluronic acid and sulfated glycosaminoglycan. It also stimulates the formation and secretion of plasminogen activator by human synovial cells. NAP-2 is a ligand for CXCR1 and CXCR2, and NAP-2, NAP-2(73), NAP-2(74), NAP-2(1-66), and most potent NAP-2(1-63) are chemoattractants and activators for neutrophils. TC-1 and TC-2 are antibacterial proteins, in vitro released from activated platelet alpha-granules. CTAP-III(1-81) is more potent than CTAP-III

desensitize chemokine-induced neutrophil activation.

**Cellular Location** Secreted.
