

M-CSF

Catalog # PVGS1492

Product Information

Primary Accession P07141
Species Mouse

Sequence Lys33-Pro187, expressed with an N-terminal Met

Purity > 95% as analyzed by SDS-PAGE

Endotoxin Level

Expression System E. coli

FormulationLyophilized after extensive dialysis against 50 mM Tris, 150 mM NaCl, pH 8.0.

Reconstitution
It is recommended that this vial be briefly centrifuged prior to opening to

It is recommended that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Reconstitute the lyophilized powder in

ddH₂O up to 100 □g/ml.

Storage & Stability Upon receiving, this product remains stable for up to 6 months at lower than

-70°C. Upon reconstitution, the product should be stable for up to 1 week at 4°C or up to 3 months at -20°C. For long term storage it is recommended that a carrier protein (example 0.1% BSA) be added. Avoid repeated freeze-thaw

cycles.

Additional Information

Gene ID 12977

Other Names Macrophage colony-stimulating factor 1, CSF-1, MCSF, Proteoglycan

macrophage colony-stimulating factor, Csf1, Csfm

Target Background Macrophage-Colony Stimulating Factor (M-CSF), also known as Colony

Stimulating Factor-1 (CSF-1), is a hematopoietic growth factor. It can stimulate the survival, proliferation and differentiation of mononuclear phagocytes, in addition to the spreading and motility of macrophages. In mammals, it exits three isoforms, which invariably share an N-terminal 32-aa signal peptide, a 149-residue growth factor domain, a 21-residue transmembrane region and a 37-aa cytoplasmictail. M-CSF is mainly produced by monocytes, macrophages, fibroblasts, and endothelial cells. M-CSF interaction with its receptor, c-fms, has been implicated in the growth, invasion, and metastasis of of several diseases, including breast and endometrial cancers. The biological activity of human M-CSF is maintained within the 149-aa growth factor domain, and it is only active in the disulfide-linked dimeric form, which is bonded at Cys63.

Protein Information

Name Csf1

Synonyms Csfm

Function Cytokine that plays an essential role in the regulation of survival,

proliferation and differentiation of hematopoietic precursor cells, especially mononuclear phagocytes, such as macrophages and monocytes. Promotes the release of pro-inflammatory chemokines, and thereby plays an important role in innate immunity and in inflammatory processes. Plays an important role in the regulation of osteoclast proliferation and differentiation, the regulation of bone resorption, and is required for normal bone development. Required for normal male and female fertility. Promotes reorganization of the actin cytoskeleton, regulates formation of membrane ruffles, cell adhesion

and cell migration. Plays a role in lipoprotein clearance.

Cellular Location Cell membrane; Single-pass type I membrane protein
