

## **CD19**

Catalog # PVGS1539

## **Product Information**

Primary Accession P15391
Species Human

Sequence Pro20-Lys291

**Purity** > 95% as analyzed by SDS-PAGE

**Endotoxin Level** 

Expression System CHO

**Formulation** Lyophilized from a 0.2 Im filtered solution in PBS.

**Reconstitution** It is recommended that this vial be briefly centrifuged prior to opening to

bring the contents to the bottom. Reconstitute the lyophilized powder in

ddH<sub>2</sub>O or PBS up to 100 □g/ml.

**Storage & Stability** Upon receiving, this product remains stable for up to 6 months at lower than

-70°C. Upon reconstitution, the product should be stable for up to 1 week at 4°C or up to 3 months at -20°C. For long term storage it is recommended that a carrier protein (example 0.1% BSA) be added. Avoid repeated freeze-thaw

cycles.

## **Additional Information**

Gene ID 930

Other Names B-lymphocyte antigen CD19, B-lymphocyte surface antigen B4, Differentiation

antigen CD19, T-cell surface antigen Leu-12, CD19, CD19

**Target Background** CD19 is a 95 kDa coreceptor, which amplifies the signaling cascade in B cells.

On the B cell surface, CD19 associates with CD21, CD81 and Leu-13 to exert its function. The cytoplasmic tail of CD19 has nine conserved tyrosine residues playing critical roles in CD19 mediated function by coupling signaling

molecules to the receptor. Mature human CD19 consists of a 272aa

extracellular domain (ECD) with two Ig-like domains, a 22aa transmembrane

segment, and a 243aa cytoplasmic domain.

## **Protein Information**

Name CD19

**Function** Functions as a coreceptor for the B-cell antigen receptor complex (BCR) on

B-lymphocytes (PubMed: <u>29523808</u>). Decreases the threshold for activation of

downstream signaling pathways and for triggering B-cell responses to antigens (PubMed:1373518, PubMed:16672701, PubMed:2463100). Activates signaling pathways that lead to the activation of phosphatidylinositol 3-kinase and the mobilization of intracellular Ca(2+) stores (PubMed:12387743, PubMed:16672701, PubMed:9317126, PubMed:9382888). Is not required for early steps during B cell differentiation in the blood marrow (PubMed:9317126). Required for normal differentiation of B-1 cells (By similarity). Required for normal B cell differentiation and proliferation in response to antigen challenges (PubMed:1373518, PubMed:2463100). Required for normal levels of serum immunoglobulins, and for production of high-affinity antibodies in response to antigen challenge (PubMed:12387743, PubMed:16672701, PubMed:9317126).

**Cellular Location** 

Cell membrane; Single-pass type I membrane protein. Membrane raft {ECO:0000250 | UniProtKB:P25918}; Single-pass type I membrane protein {ECO:0000250 | UniProtKB:P25918}

**Tissue Location** 

Detected on marginal zone and germinal center B cells in lymph nodes (PubMed:2463100). Detected on blood B cells (at protein level) (PubMed:16672701, PubMed:2463100)
