## Additional Information

<b>Target Background</b>	CLEC12A, also known as CLL-1 is inhibitory C-type lectin-like receptor with ITIM motif. It can associate with signaling phosphatases SHP-1 and SHP-2. CLEC12A is a potential target due to its high expression in acute myeloid leukemia (AML) cells. And there are various therapeutic approaches using CLEC12A as a target for AML, such as CD3/ CLEC12A antibody. It can recruit unstimulated primary T cells against cancer cells with CLL-1 on the surface.
