

CD5

Catalog # PVGS1885

Product Information

| | |
|---------------------------------------|---|
| Primary Accession Species | P13379 Mouse |
| Sequence | Ser25-Pro371 |
| Purity | > 95% as determined by Bis-Tris PAGE > 95% as determined by HPLC |
| Endotoxin Level | Less than 1EU per μ g by the LAL method. |
| Expression System | HEK293 |
| Theoretical Molecular Weight | 38.9 kDa |
| Formulation Reconstitution | Lyophilized from a 0.22 μ m filtered solution in PBS , (pH 7.4). Centrifuge the tube before opening. Reconstituting to a concentration more than 100 μ g/ml is recommended. Dissolve the lyophilized protein in distilled water. |
| Storage & Stability | Upon receiving, the product remains stable up to 6 months at -20 °C or below. Upon reconstitution, the product should be stable for 3 months at -80 °C. Avoid repeated freeze-thaw cycles. |

Additional Information

| | |
|--------------------------|--|
| Gene ID | 12507 |
| Other Names | T-cell surface glycoprotein CD5, Lymphocyte antigen 1, Ly-1, Lyt-1, CD5, Cd5, Ly-1 |
| Target Background | CD5: a type I transmembrane protein found on T cells, thymocytes, and some B cells that is a ligand for CD72 and is involved in cellular activation or adhesion; expressed in B-cell chronic lymphocytic leukemia and T-cell lymphoma. |

Protein Information

| | |
|-----------------|--|
| Name | Cd5 |
| Synonyms | Ly-1 |
| Function | Lymphoid-specific receptor expressed by all T-cells and in a subset of B-cells |

known as B1a cells. Plays a role in the regulation of TCR and BCR signaling, thymocyte selection, T-cell effector differentiation and immune tolerance (PubMed:[35720357](#)). Acts by interacting with several ligands expressed on B-cells such as CD5L or CD72 and thereby plays an important role in contact-mediated, T- dependent B-cell activation and in the maintenance of regulatory T and B-cell homeostasis (PubMed:[24950378](#), PubMed:[9064341](#), PubMed:[9723705](#)). Functions as a negative regulator of TCR signaling during thymocyte development by associating with several signaling proteins including LCK, CD3Z chain, PI3K or CBL (PubMed:[11157848](#)). Mechanistically, co- engagement of CD3 with CD5 enhances phosphorylated CBL recruitment leading to increased VAV1 phosphorylation and degradation (By similarity). Modulates B-cell biology through ERK1/2 activation in a Ca(2+)-dependent pathway via the non-selective Ca(2+) channel TRPC1, leading to IL-10 production (By similarity).

Cellular Location

Cell membrane; Single-pass type I membrane protein

Please note: All products are 'FOR RESEARCH USE ONLY. NOT FOR USE IN DIAGNOSTIC OR THERAPEUTIC PROCEDURES'.
